**Section one: Comprehension (09 points)**

**SESSION NORMALE**

*Read the following text carefully and answer the questions on it.*

**Text: "Comfort is the Aim of Science"**

Man's physical comfort depends on his control over the forces of nature. Primitive man endured many and grievous discomforts because he had not learned how to turn to his own uses the resources that nature provided so abundantly around him. His food supply was uncertain; his clothing was scanty and rough; he could not even make a fire without much difficulty and labour. In the modern civilised world, the food supply is guaranteed by means of an efficient transport system; light and heat are easily obtainable by means of gas and electricity; all kinds of fine and beautiful materials for clothing are rapidly and cheaply made by means of machinery. The fact that the prime requirements of life are now so easily available is due to the increase in man's knowledge of, and power over, nature – in other words, to the development of science. Science, then, has contributed to man's comfort by providing him amply with those things on which his existence depends.

But science has done more than this. In these days a man does not consider himself to be living "comfortably" if he has satisfied merely the basic needs of life. He desires other things—things that are to a greater or less degree luxuries. He wants to be able to travel freely, to have a convenient house, to have various means of amusement. Here again, science, especially as applied to manufacture, comes to his assistance. He is provided with railway trains, motor cars, aeroplanes, bicycles, with cinema and television, with unlimited numbers of cheap books, with telegraphs and telephones, and with numberless things that help to make his existence easy and pleasant. At every turn we make use of little conveniences provided by the scientist. We could not strike a match, nor write with a fountain pen, we could not use an automatic ticket machine, nor tell the time, nor use a lift, if it were not for his labours.

In addition to supplying us abundantly with necessaries and luxuries, the scientist has provided us with remedies against the gravest ills of life. Human beings are always in danger from diseases and disasters. The astonishing advances in medical science have made it possible to cure many diseases, to stop pain, and to carry out successfully the most dangerous surgical operations.

In these ways, then, it is clear that the comfort of the human race has been vastly increased by the efforts of scientists.
